EDUCATION

ITM Skills University

B.Tech – Computer Science & Engineering | CGPA: **9.73** | Academic Topper 2024-25 & 2025-26

2024 – 2028

Kharghar, Maharashtra

EXPERIENCE

FOSSEE – IIT Bombay

May 2026 – Aug 2026

Software Development Intern (Open Source)

On-Site

- **Stack:** Python, Matplotlib, LaTeX, CAD tooling, Git/GitHub – working inside **OSDAG-BRIDGE**, an open-source bridge design tool built by a 25+ contributor team
- Wrote backend modules across the CAD generation, plotting, and report-generation layers, wiring solver output through to the UI
- Built nodal-load visualization (Grillage overlay + toolbar controls) and **LaTeX**-driven report/plot auto-generation from analysis results
- Optimized and refactored core CAD/plotting code paths for speed and reuse; fixed cross-module bugs surfaced during integration testing
- Picked up a real **Git/GitHub** workflow on the job – branching, rebasing, resolving conflicts, and iterating through PR review cycles with the core team
- Full contribution history: github.com/Aditya-Donde/OsdagBridge/pulls (author:Soham-1304)

PROJECTS

Dhokha – UPI Fraud Intelligence Platform

2026 – Present

FastAPI, LightGBM, ONNX, NetworkX, WebSockets, React | [GitHub](#) | [Live](#)

- Built a cross-bank UPI fraud-detection backend combining a **LightGBM** risk model (compiled to **ONNX** for CPU inference) with rule-based checks to score every transaction 0–100 in real time
- Designed a **NetworkX**-based transaction graph to catch fraud swarms/mule networks by scoring node centrality and connection patterns between accounts, feeding results into the composite risk score
- Exposed a unified **FastAPI** service with REST endpoints and a **WebSocket** stream for live transaction/alert events, backed by a persisted transaction history store
- Shipped a React + Vite investigation dashboard for analysts, and containerized the backend with **Docker** for AWS (EC2/ECS/App Runner) deployment behind Nginx + TLS

Evercare

2026 – Present

React 19, Node.js, Express, Supabase, Gemini AI, OCR | [GitHub](#)

- Architected full-stack health platform with Supabase authentication and Row-Level Security for secure multi-tenant data isolation across user roles
- Designed modular REST APIs for vitals tracking, appointment scheduling, document management, and AI-driven health analysis
- Built Gemini AI + OCR pipeline to automate lab report extraction and generate structured patient health insights from unstructured documents
- Structured backend using controller-service pattern ensuring separation of concerns and horizontal scalability of individual service modules

QuizStorm

2025 – Present

MERN, Socket.IO, MongoDB, JWT | [GitHub](#)

- Engineered backend-authoritative game engine using Socket.IO; server exclusively controls all timer ticks, score computation, and state transitions – clients are purely reactive
- Implemented event-driven WebSocket architecture for real-time answer validation and synchronized leaderboard updates across all connected clients
- Modeled scalable MongoDB schemas with clean separation of API, socket, and middleware layers; each concern independently testable and deployable
- Designed REST API surface for JWT-based authentication and full game room lifecycle: create, join, start, end, and history

Samruddhi

PostgreSQL, MongoDB, Redis, Supabase, JWT | [GitHub](#)

- Architected hybrid EHR backend (PostgreSQL + MongoDB) with Supabase JWT auth and Row-Level Security for fine-grained, per-row access control on patient records
- Implemented distributed consent system using Redis TTL tokens, QR-based sharing links, and pre-signed cloud storage uploads for auditable document access

TECHNICAL SKILLS

Languages : Python, JavaScript, C++, SQL | Golang (currently learning)

Backend & APIs: Node.js, Express, FastAPI, REST APIs, WebSockets, Socket.IO, JWT, Controller-Service & Microservice Patterns

Databases : MySQL, PostgreSQL (Supabase, RLS), MongoDB, Redis

ML & Data : LightGBM, ONNX, NetworkX, NumPy, Pandas, Matplotlib (3D), OpenSees

AI & Automation: Gemini API, OCR Pipelines, RAG Architecture, n8n, Langflow

DevOps & Cloud : Docker, AWS (EC2, App Runner, API Gateway), GCP (basics), Nginx, Vercel, Render, Git, CI/CD

Core CS : Data Structures & Algorithms, OOP, DBMS, OS, System Design, Computer Networks

LEADERSHIP & ACTIVITIES

Lead – Competitive Coding Club

2025 – Present

ITM Skills University

- Organized campus-wide coding contests and DSA workshops; mentored juniors in Data Structures, Algorithms, and time/space complexity analysis

Competitive Programming: Solved **280+** problems on LeetCode with strong focus on algorithmic optimization, edge-case handling, and time/space complexity trade-offs
